PROFESSIONAL SUMMARY

I'm a junior full-stack developer with bachelor's degree in Computer Science and a diploma in Full Stack Software Development from Lambton College in Ottawa, Canada. Worked on developing web applications as well as back-end applications with the help of programming languages like c#. ASP.NET, SQL Server, and JavaScript. Currently seeking junior/ new grad software positions in Canada and improving skills in React, testing and French.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, C#, SQL

Back-end: ASP.NET, REST APIs, MVC

Data: MySQL, SQL Server

Tools: Git, GitHub, Postman,

Cloud: Azure Fundamentals

Currently learning: React, TypeScript, French

EDUCATION

Postgraduate Diploma, Full Stack Software Development - Lambton College

May 2024 - Dec 2025

Ottawa, Ontario – Grade: 3.65/4.0

PROJECTS

Student Attendance System –C#, SQL Server, ASP.NET, MVC

GitHub: https://github.com/Mdmustafasalman748/Student_Attendance_system

- Built the student and course records (list/create/edit/delete) as SQL Server tables, with a unique constraint on roll number and course code to block duplicates.
- Built the attendance-marking grid – pick a course and date, mark every student Present/Absent/Late in one form, backed by a unique index on (student, course, date) so the same student can't be marked twice for the same class on the same day.
- Wrote the Dockerfile and GitHub actions pipeline that builds, tests, and deploys to Render via a deploy hook on every push to main.

PG Life Housing – HTML, CSS, JavaScript

GitHub: <https://github.com/Mdmustafasalman748/PG-Life>

- Built the property listing grid: render cards (name, location, price, room type, availability badge) from a JS data set, re-rendering on every search instead of a static page per listing.

- Built the city search: typing a city or tapping a city tile filters listings to an exact match, with a live result count and a “no properties found” empty state.
- Deployed as a static site on Vercel, with a GitHub actions check that validates the required frontend files and index.html is well-formed on every push.

Cloud Expense Tracker – React, JavaScript, JWT

GitHub: <https://github.com/Mdmustafasalman748/Cloud-Expense-Tracker>

- Built the analytics dashboard – category breakdown, monthly trend, and daily-spending charts computed client-side from the fetched expense list.
- Built CSV/PDF/JSON export: generates a formatted PDF report or a CSV/JSON download, for either the filtered results or the full expense list.
- Wired the React app to the REST API with JWT auth: Axios request interceptor attaches the token to every call; response interceptor clears the session and redirects to /login on a 401.

EXPERIENCE

.NET Intern - MNET Academy

Hyderabad, TG, India

- I’ve worked on application features using C# and ASP.NET by linking frontend to the backend.
- Designed an SQL Server database and implemented CRUD operations to manage student information.
- Created an interface using HTML, CSS, and JavaScript with a focus on object-oriented programming and database management.

Web Development Intern - Internshala

Hyderabad, TG, India

- Built web application features using HTML, CSS, and JavaScript.
- Contributed to the PG Life Housing Project, a web application helping students find suitable accommodation

CERTIFICATIONS

Full Stack .NET Development from MNET Academy | Microsoft MS-900 Fundamentals from Udemy | Web Development from Internshala

WORK AUTHORIZATION

Authorized to work in Canada (PGWP valid to May 2029).
